

Architectural Walsz 

The Future of Construction

Sustainable, readily responsive, designed to empower.

Why build any other way?

Architectural Wallsz uses a building process powered by technology. We're changing the face of construction with industry-leading software and advanced manufacturing. Complete interior spaces are built faster, cleaner and more sustainably. We remove the guesswork with the power of ICE technology and it provides certainty on cost, schedule and the final result. Long term, an Architectural Wallsz interior is ready to respond to whatever the future brings.

What you see is what you get

Remove the guesswork. Explore your space in interactive virtual reality. Make changes on the spot. You'll feel more confident knowing what you see is exactly what will be built and it won't cost more than you expect.

Sustainable

Building green starts with reducing and reusing. Your space is made clean and fast. Material waste is dramatically decreased. Even in the long term, interiors are adaptable and responsive without renovation waste.

Readily Responsive

Need to respond to new technology? Growing your team? Your prefabricated space is ready for the future right from the start. Adapt with ease whilst protecting your investment (and the environment too).

You're in the driver's seat

Our technology makes you the boss. From planning to Installation. We give you the power and the team for you to run the show.

Move in weeks sooner

Our maximum lead time for manufacture is 21 days. Combined, with our rapid install solution and no-mess strategy, you are able to move into your new space weeks sooner.

Spaces to Work

Build the perfect interior space for what you need now – and whatever the future brings. This is digital construction at its best.
